ClearBand

1x Red Blood Cell Lysis Buffer

- Molecular biology grade ammonium chloride in ultrapure water.
- Rapid red blood cell lysis with little to no effect on leukocytes.
- Ready to use.

Applications

It is formulated for effective and quick lysis of red blood cells with little to no effect on leukocytes.

Ordering options

CATALOG NO.	PACK SIZE
RBCLB01	100 mL
RBCLB05	500 mL

Storage

Store between 2°C and 8°C.

Shipping

Ship at ambient temperature.

ClearBand

3M Potassium Acetate

- ClearBand Potassium Acetate, 3M pH 5.5 Ready-to-use Solution is prepared using molecular biology grade potassium acetate in ultrapure water.
- ClearBand Potassium Acetate, 3M pH 5.5 Ready-to-use Solution is 0.22 µm filter sterilized and suitable for purification and precipitation of nucleic acids.
- It can be used also for precipitating dodecyl sulfate (DS) and DS-bound proteins allowing the removal of proteins from DNA.

Applications

It can be used also for precipitating dodecyl sulfate (DS) and DS-bound proteins allowing the removal of proteins from DNA.

ClearBand

Red Blood Cell Lysis Buffer (10X)

- ClearBand 10x Red Blood Cell Lysis Buffer is prepared using molecular biology grade ammonium chloride in ultrapure water.
- For effective and quick lysis of red blood cells with little to no effect on leukocytes.
- ClearBand 10x Red Blood Cell Lysis Buffer should be diluted in double-distilled water prior to use.

Applications

It is formulated for effective and quick lysis of red blood cells with little to no effect on leukocytes.

ClearBand

RNAintact, RNA stabilization solution

- Prepared using molecular biology grade reagents in ultrapure water.
- ClearBand RNAintact penetrates tissues and cells rapidly and allows stabilization and protection of cellular RNA in unfrozen fresh specimens at room temperature.
- ClearBand RNAintact does not necessitate immediate processing of samples for RNA isolation or freezing of samples in liquid nitrogen for further processing.
- The integrity of the RNA content of the cells and tissue pieces that are immediately immersed in ClearBand RNAintact is maintained.

Sample / input

Fresh tissues and cells.

ClearBand

TRUEzol LS Reagent

- A ready-to-use reagent composed of phenol and a mixture of other components for the isolation of high-quality total RNA from various liquid biological materials of human, animal, plant, yeast, bacterial, and viral origin.
- Not suitable for use with whole blood.

Applications

This product is not suitable for use with whole blood.

Sample / input

Liquid biological material of human, animal, plant, yeast, bacterial or viral origin. Not suitable for whole blood.

EcoPURE

BYF Genomic DNA Kit

- EcoPURE Bacterial/Yeast/Fungi Genomic DNA Kit is designed for simple, convenient purification of high-quality genomic DNA from Gram-negative and Gram-positive bacterial cells, yeast, and fungi.
- This kit utilizes chaotropic ions and silica-based membrane technology, eliminating the need for expensive resins, hazardous phenol-chloroform extractions, or time-consuming alcohol precipitation.
- The standard protocol lasts less than 25 minutes and purified DNA can be used directly in PCR, qPCR, sequencing and enzymatic reactions.

Applications

The standard protocol lasts less than 25 minutes and purified DNA can be used directly in PCR, qPCR, sequencing and enzymatic reactions.

Sample / input

Gram-negative and Gram-positive bacteria, yeast and fungi.

EcoPURE

Genomic DNA Kit

- Designed for simple, convenient purification of high-quality genomic DNA from various samples including whole blood, cultured cells, frozen or fresh tissues, rodent tails, yeast, Gram-positive or Gram-negative bacteria, insects, dried blood spots, and buccal swabs.
- This kit utilizes chaotropic ions and silica-based membrane technology, eliminating the need for expensive resins, hazardous phenol-chloroform extractions, or time-consuming alcohol precipitation.
- The standard protocol lasts less than 25 minutes and purified DNA can be used directly in PCR, qPCR, sequencing and enzymatic reactions.

EcoPURE

PCR/Gel Purification Kit

- This product combines 2 kits in 1.
- For effective and fast purification of polymerase chain reaction (PCR) products.
- Using this kit, primer dimers, free nucleotides in the reaction, salts, and Taq polymerase can be easily removed.
- This kit is also suitable for purification of nucleic acids from reactions including restriction digestion, alkaline phosphatase treatment, or kinase reactions.

Applications

It is designed for effective and fast purification of polymerase chain reaction (PCR) products.

EcoPURE

Total RNA Kit

- Designed for simple, convenient purification of high-quality total RNA including small RNAs (e.g. microRNAs) from whole blood, cultured cells, and frozen or fresh tissues.
- This kit utilizes chaotropic ions and silica-based membrane technology, eliminating the need for expensive resins, hazardous phenol-chloroform extractions, β -mercaptoethanol, or time-consuming alcohol precipitation.
- The standard protocol lasts less than 10 minutes at room temperature and purified RNA can be effectively used in routine downstream applications including cDNA synthesis, northern blotting, differential display, primer extension, and mRNA selection.

Applications

This product is designed for simple, convenient purification of high-quality total RNA including small RNAs (e.g. microRNAs) from whole blood, cultured cells, and frozen or fresh tissues.

Sample / input

Whole blood, cultured cells, and fresh or frozen tissues; includes small RNAs.

ClearBand

10x PCR Reaction Buffer, (w/o MgCl₂)

- ClearBand 10x PCR Buffer, (w/o MgCl₂) is a ready-to-use reaction buffer formulated for use in standard PCR applications.
- It is designed to provide the appropriate ionic strength and chemical environment required for efficient DNA amplification when used with compatible DNA polymerases.

Applications

ClearBand 10x PCR Buffer, (w/o MgCl₂) is a ready-to-use reaction buffer formulated for use in standard PCR applications.

ClearBand

DNA Loading Dye 6x - Blue

- ClearBand 6x DNA Loading Dye Blue is a pre-mixed buffer, which can be used for loading DNA markers and samples into the wells of agarose and non-denaturing polyacrylamide gels.
- It contains two tracking dyes, Xylene Cyanol FF and Bromophenol Blue, for visualization of DNA migration on the gels.
- Xylene Cyanol FF runs around 4000 bp and Bromophenol Blue runs around 400 bp fragment in agarose gels, which provides a feasible tracking of DNA before it runs off the gel.

Applications

ClearBand 6x DNA Loading Dye Blue is a pre-mixed buffer, which can be used for loading DNA markers and samples into the wells of agarose and non-denaturing polyacrylamide gels.

ClearBand

DNA Loading Dye 6x - Green

- ClearBand 6x DNA Loading Dye Green is a pre-mixed buffer, which can be used for loading DNA markers and samples into the wells of agarose and non-denaturing polyacrylamide gels. It contains two tracking dyes, Xylene Cyanol FF and Orange G, for visualization of DNA migration on the gels.
- Orange G runs around 50 bp fragment in agarose gels, which provides much better tracking of DNA before it runs off the gel.
- Besides, Orange G does not result in formation of a dark shadow on the gel as Bromophenol Blue does, which runs around 400 bp fragment precisely where PCR fragments are likely to be.

Applications

ClearBand 6x DNA Loading Dye Green is a pre-mixed buffer, which can be used for loading DNA markers and samples into the wells of agarose and non-denaturing polyacrylamide gels. It contains two tracking dyes, Xylene Cyanol FF and Orange G, for visualization of DNA migration on the gels.

ClearBand

dNTP Mix, 10 mM each

- ClearBand dNTP (2'-deoxynucleoside 5'-triphosphate) Mix, 10 mM each consists of all four nucleotides (dATP, dCTP, dGTP, dTTP), each at a concentration of 10 mM, in water (pH 7.4).
- ClearBand dNTP Mix is designed to save time and to provide higher reproducibility in PCR and other applications.

Applications

ClearBand dNTP Mix is designed to save time and to provide higher reproducibility in PCR and other applications.

ClearBand

MgCl₂, 25 mM

- ClearBand MgCl₂, 25 mM is a ready-to-use magnesium chloride solution developed for use in a variety of molecular biology applications, particularly PCR and other enzymatic DNA amplification workflows.
- Magnesium ions are essential cofactors for many DNA polymerases and play a critical role in enzyme activity, primer annealing behavior, product specificity, and amplification yield.

Applications

ClearBand MgCl₂, 25 mM is a ready-to-use magnesium chloride solution developed for use in a variety of molecular biology applications, particularly PCR and other enzymatic DNA amplification workflows.

ClearBand

Nuclease Free Ultra-Pure Water

- Nuclease-free water for molecular biology applications.
- Processed by deionization, reverse osmosis, UV treatment, 0.2 µm filtration and double autoclaving.

Applications

This product is prepared under stringent conditions and is suitable for all applications in a molecular biology laboratory.

ClearBand

SAFE DNA Gel Stain Solution (20000x)

- ClearBand SAFE DNA Gel Stain Solution, 20,000x, is an aqueous fluorescent nucleic acid gel stain as an alternative to traditional ethidium bromide (EtBr) to be used at 1x concentration in agarose or polyacrylamide gels.
- One vial (1 mL) of ClearBand SAFE DNA Gel Stain Solution, 20,000x, can be used to prepare at least 200 precast mini gels.
- ClearBand SAFE DNA Gel Stain Solution, 20,000x is compatible with downstream applications including gel extraction and cloning.
- Affordable: Low cost.

Applications

Suitable for blue LED detection.

Direct Blood EcoTaq DNA Polymerase, 5 U/μL

- Direct Blood EcoTaq DNA Polymerase is an engineered variant of Taq DNA polymerase, developed through N-terminal truncation and targeted mutations.
- This modification enhances tolerance to common PCR inhibitors, enabling direct DNA amplification from whole blood samples of human and mouse origin without the need for prior DNA extraction or purification.

Sample / input

Human or mouse whole blood; no prior DNA purification required.

EcoTaq

2X PCR Master Mix

- EcoTaq 2x PCR Master Mix is designed for effective and fast amplification of templates, up to 7 kb, with high fidelity.
- The mix is provided at 2x concentration and contains EcoTaq DNA Polymerase, dNTPs, and optimized buffer.
- The blue dye within the mix allows immediate loading of reaction mixture after PCR.
- The products are a mixture of blunt ends and single base (A) 3' overhang and can be used for direct T/A cloning.

Applications

Applications: High throughput PCR, Routine PCR with high reproducibility, T/A Cloning, RT-PCR

EcoTaq

DNA Polymerase

- A purified recombinant enzyme for amplification of DNA templates up to 5 kb.
- It has 5'→3' DNA polymerase and 5'→3' exonuclease activity, but no 3'→5' exonuclease activity.
- The elongation rate is 2 kb/min.
- PCR products are a mixture of blunt ends and single-base (A) 3' overhangs and can be used for T/A cloning.

EcoTaq

HotStart DNA Polymerase, 5 U/μL

- EcoTaq HotStart DNA Polymerase is a mixture of a monoclonal anti-Taq antibody and recombinant Taq DNA Polymerase, specifically designed for high-specificity PCR applications.
- The antibody binds to the Taq DNA polymerase and inhibits its activity at low temperatures, effectively preventing non-specific primer annealing and primer-dimer formation prior to thermal cycling.

Applications

EcoTaq HotStart DNA Polymerase is a mixture of a monoclonal anti-Taq antibody and recombinant Taq DNA Polymerase, specifically designed for high-specificity PCR applications.

2x SYBR Master Mix

Format	2x master mix
Enzyme	Antibody-based hot-start EcoTaq DNA polymerase
Activation	95°C for 5 seconds, as described in the datasheet
Reaction setup	10 µL master mix in a 20 µL reaction

Applications

Real-time qPCR and rapid qPCR programs for target gene quantification.

Sample / input

Genomic DNA or cDNA. Typical input: 10-100 ng genomic DNA or 1-10 ng cDNA; optimize for the target.

Oligo(dT)18

- 18 deoxythymidine residues that hybridize to the poly(A) tail of eukaryotic mRNA.
- Primer for first-strand cDNA synthesis; supplied in distilled water.
- Recommended with EcoScript 5x First Strand cDNA Synthesis Kit (ERT50 / ERT100 / ERT200).

Applications

This product primer is a string of 18 deoxythymidylic acid residues that hybridizes to the poly(A) tail of most eukaryotic mRNA and can be used as a primer for first-strand cDNA synthesis with reverse transcriptase.

Sample / input

Poly(A)-tailed eukaryotic mRNA.

19:1 40% Acrylamide/Bisacrylamide

- ClearBand Acrylamide/Bisacrylamide, 19:1 40% Ready-to-use Solution is prepared using molecular biology grade acrylamide and bisacrylamide in ultrapure water.
- ClearBand Acrylamide/Bisacrylamide, 19:1 40% Ready-to-use Solution is 0.22 µm filter sterilized and suitable for electrophoresis of both proteins and nucleic acids.
- It can be used for preparation of stacking and resolving gels during sodium dodecyl sulfate polyacrylamide gel electrophoresis.

Applications

It can be used for preparation of stacking and resolving gels during sodium dodecyl sulfate polyacrylamide gel electrophoresis.

ClearBand

WellTracker, 100x

- ClearBand WellTracker is specifically formulated to easily see the wells of the SDS-PAGE gels when loading samples.
- It is supplied as 100x concentrate and added in stacking gel to better visualize the wells of the gel.
- The special dye within ClearBand WellTracker migrates with bromophenol blue and does not interfere with the samples when they run in the gel.
- It is totally inert and does not affect the transfer efficiency of proteins from gel to the membrane.

Applications

ClearBand WellTracker is specifically formulated to easily see the wells of the SDS-PAGE gels when loading samples.

Cell Cycle Analysis Kit

- This product detects alterations in cell cycle by measuring DNA content.
- Intended to be used to detect the DNA content (cell cycle) of cultured suspension or adherent cells.

Applications

This product is intended to be used to detect the DNA content (cell cycle) of cultured suspension or adherent cells.

Sample / input

Cultured suspension or adherent cells.

NutriCulture

DMEM, High Glucose

- Basal cell culture medium with 4500 mg/L glucose.
- Four-fold amino acid and vitamin concentrations relative to Eagle's Minimal Essential Medium.
- Prepared with tissue culture-grade water and sterile filtered through a 0.1 µm filter.
- Each lot is tested for bacterial, fungal and mycoplasmal contamination.

Applications

Culture of mammalian cells, including primary fibroblasts, neurons, glial cells and established cell lines.

Ordering options

NutriCulture

DMSO (Dimethyl Sulfoxide), Sterile

- This product is a colorless, polar, aprotic organic solvent used in chemical research.
- It is miscible with water and many other organic solvents.
- This product is also widely used in polymerase chain reactions (PCR) as a co-solvent, helping to inhibit the formation of secondary structures from DNA fragments and as a cryoprotectant vitrification agent for the preservation of cells, tissues and organs via prevention of ice crystal formation during cryopreservation.

Applications

This product, is a colorless, polar, aprotic organic solvent used in chemical research.

NutriCulture

EcoTRAX Transfection Reagent

- Transfection reagent for delivery of plasmid DNA, siRNA or microRNA into eukaryotic cells.
- After mixing with nucleic acids, the reagent protects its cargo from degradation and supports efficient delivery.
- The procedure can be completed in 30 minutes.

Applications

This product is formulated as a powerful transfection reagent that ensures effective and reproducible transfection with low cytotoxicity.

Sample / input

Plasmid DNA, siRNA or microRNA for delivery into eukaryotic cells.

NutriCulture

Fetal Bovine Serum (FBS), Heat Inactivated

- NutriCulture Fetal Bovine Serum (FBS) is used to supplement basal growth medium in cell culture applications.
- NutriCulture FBS can provide the cell health, maintenance and viability critical for optimal performance and cell growth in your culture medium.
- Heat inactivation of serum is performed by raising the temperature of the serum to 56°C and maintaining that temperature for 30 minutes.

Applications

NutriCulture Fetal Bovine Serum (FBS) is used to supplement basal growth medium in cell culture applications.

NutriCulture

LDH Cytotoxicity Assay Kit

- For measuring cell damage by quantifying the activity of lactate dehydrogenase (LDH) released by cells into the culture medium.
- LDH is an enzyme present in the cytoplasm, and is released into the culture medium when the cell membrane is damaged.
- Since the released LDH is stable, measuring the amount of LDH in the medium can be used as an indicator to measure the quantity of dead and damaged cells.

Applications

Since the released LDH is stable, measuring the amount of LDH in the medium can be used as an indicator to measure the quantity of dead and damaged cells.

Sample / input

Culture medium containing LDH released by damaged cells.

NutriCulture

Mycoplasma Detection Kit

- For screening newly introduced cell lines and primary cell cultures for mycoplasma.
- Suitable for periodic monitoring of routinely maintained cultures.
- Supports rapid screening of multiple samples.

Applications

This product is useful for the routine screening of cell lines newly introduced into the laboratory, for initial analysis of primary cell cultures, and for the periodic monitoring of routinely used cell cultures.

Sample / input

Cell lines, primary cell cultures and routinely used cell cultures.

NutriCulture

Phosphate Buffered Saline (1x), pH 7.4

- NutriCulture Phosphate-Buffered Saline (PBS) is a balanced salt solution, which is used for a number of cell culture applications including washing cells before trypsinization, transport of cells or tissue samples, diluting cells for counting, and preparing reagents.
- NutriCulture PBS does not contain calcium and magnesium for rinsing chelators from the culture before cell dissociation.
- NutriCulture PBS is prepared with ultrapure water, filter sterilized and autoclaved.

Applications

NutriCulture Phosphate-Buffered Saline (PBS) is a balanced salt solution, which is used for a number of cell culture applications including washing cells before trypsinization, transport of cells or tissue samples, diluting cells for counting, and preparing reagents.

ChemiPURE

Acrylamide, Electrophoresis Grade, $\geq 99\%$

CAS No.	79-06-1
Molecular weight (MW)	71.08 g/mol
Molecular formula	C_3H_5NO
Purity	$\geq 99\%$
Appearance	White crystalline powder
Solubility	Soluble 2.5 g in 10 mL water

Product overview

- ChemiPURE Acrylamide, electrophoresis grade, $>99\%$, is a water-soluble compound that cross-links to produce polyacrylamide gels that are widely used in chromatography and the electrophoretic separation of nucleic acids and proteins.

ChemiPURE

Ammonium Acetate, ≥ 98%

CAS No.	631-61-8
Purity	≥98%
Molecular weight (MW)	77.08 g/mol
Molecular formula	CH ₃ COONH ₄
Appearance	White crystalline powder

Product overview

- ChemiPURE Ammonium Acetate (CH₃COONH₄) is a high-purity laboratory reagent (≥98%) designed for research, analytical, biochemical, molecular biology, microbiology, and pharmaceutical laboratory applications.
- As a highly water-soluble ammonium salt, it is widely used in buffer preparation, nucleic acid purification, protein analysis, chromatography, and mass spectrometry workflows.

ChemiPURE

Ammonium Chloride, $\geq 99.5\%$

CAS No.	12125-02-9
Purity	$\geq 99.5\%$
Molecular weight (MW)	53.49 g/mol
Molecular formula	NH ₄ Cl
Appearance	White crystalline powder

Product overview

- ChemiPURE Ammonium Chloride (NH₄Cl) is a high-purity laboratory reagent ($\geq 99.5\%$) intended for research, analytical, biochemical, molecular biology, microbiology, and pharmaceutical laboratory applications.
- As a highly water-soluble ammonium salt, it is widely used in buffer preparation, microbiological media, cell biology, protein purification, and analytical chemistry applications.

ChemiPURE

Ammonium Persulfate for molecular biology, suitable for electrophoresis

CAS No.	7727-54-0
Purity	≥98%
Molecular weight (MW)	228.20 g/mol
Molecular formula	H ₈ N ₂ O ₈ S ₂
Appearance	Crystalline powder
Density	1.982 g/cm ³ at 20° C

Product overview

- ChemiPURE Ammonium persulfate (APS) is a strong oxidizing agent widely used as a free radical initiator in polymerization reactions, particularly in polyacrylamide gel electrophoresis (PAGE).
- In the presence of TEMED, APS decomposes to generate free radicals that initiate the polymerization of acrylamide and bis-acrylamide, enabling rapid and uniform gel formation.
- Due to its high reactivity and reliability, APS is an essential component in SDS-PAGE and native PAGE applications, ensuring consistent gel quality and reproducible electrophoretic performance.

ChemiPURE

Ammonium Sulfate

CAS No.	7783-20-2
Purity	≥99%
Molecular weight (MW)	132.14 g/mol
Molecular formula	H ₈ N ₂ O ₄ S
Appearance	White crystalline powder

Product overview

- A highly water-soluble inorganic salt widely used in molecular biology and biochemistry, particularly for protein purification and fractionation by salting-out.
- It enables selective precipitation of proteins based on their solubility, allowing efficient concentration and partial purification from complex mixtures.
- Due to its stabilizing effect on protein structure and enzymatic activity, ammonium sulfate is also commonly used in enzyme storage and crystallization studies.

ChemiPURE

Ampicillin Sodium Salt

CAS No.	69-52-3
Molecular weight (MW)	371.39 g/mol
Molecular formula	C ₁₆ H ₁₈ N ₃ NaO ₄ S
Appearance	White to light yellow powder

Product overview

- This product is a broad-spectrum β -lactam antibiotic widely used in molecular biology, microbiology, and cell culture applications.
- It is effective against a wide range of Gram-positive and Gram-negative bacteria by inhibiting bacterial cell wall synthesis through binding to penicillin-binding proteins (PBPs), ultimately leading to cell lysis.

ChemiPURE

Boric Acid, $\geq 99.9\%$

CAS No.	10043-35-3
Purity	$\geq 99.9\%$
Molecular weight (MW)	61.83 g/mol
Molecular formula	H ₃ BO ₃
Appearance	White crystalline powder

Product overview

- ChemiPURE Boric Acid (H₃BO₃) is a high-purity laboratory reagent ($\geq 99.9\%$) intended for research, analytical, biochemical, and industrial laboratory applications.
- Boric acid is a weak inorganic acid widely used in molecular biology, electrophoresis, microbiology, analytical chemistry, and pharmaceutical laboratories due to its buffering properties and chemical stability.

ChemiPURE

Calcium Carbonate, ACS grade

CAS No.	471-34-1
Molecular weight (MW)	100.09 g/mol
Molecular formula	CaCO ₃
Purity	≥99%
Appearance	White powder

Product overview

- ChemiPURE Calcium Carbonate (CaCO₃) is a widely used inorganic compound with applications in analytical laboratories, chemical processing, biotechnology, and general research.
- It appears as a white, odorless powder and is practically insoluble in water, while readily reacting with acids to release carbon dioxide.

ChemiPURE

Coomassie Brilliant Blue, G-250

CAS No.	6104-58-1
Molecular weight (MW)	854.02 g/mol
Molecular formula	C ₄₇ H ₄₈ N ₃ NaO ₇ S ₂
Appearance	Dark blue to brown powder

Product overview

- ChemiPURE Coomassie Brilliant Blue G-250 is a high-quality laboratory dye designed for research, molecular biology, biochemistry, proteomics, and analytical laboratory applications.
- It is widely used for sensitive protein staining and quantitative protein determination in a variety of biochemical assays.

ChemiPURE

di-Sodium Hydrogen Phosphate Dihydrate, $\geq 99.5\%$

CAS No.	10028-24-7
Purity	$\geq 99.5\%$
Molecular weight (MW)	177.99 g/mol
Molecular formula	$\text{Na}_2\text{HPO}_4 \cdot 2\text{H}_2\text{O}$
Appearance	White crystalline powder

Product overview

- ChemiPURE di-Sodium Hydrogen Phosphate Dihydrate ($\text{Na}_2\text{HPO}_4 \cdot 2\text{H}_2\text{O}$) is a high-purity laboratory reagent ($\geq 99.5\%$) suitable for research, analytical, biochemical, molecular biology, microbiology, and pharmaceutical laboratory applications.
- As an important component of phosphate buffer systems, it is widely used for preparing solutions that require stable physiological pH and controlled ionic strength.

ChemiPURE

EDTA, Disodium Dihydrate, Molecular Biology Grade

CAS No.	6381-92-6
Molecular weight (MW)	372.24 g/mol
Molecular formula	C ₁₀ H ₁₄ N ₂ Na ₂ O ₈ · 2H ₂ O
Purity	≥99.5%
Appearance	White crystalline powder
Solubility	10% in water

Product overview

- This product chelates metal ions, forming an octahedral complex with divalent cations.
- This is useful in molecular biology research to inhibit enzymes dependent on activation by metal ions.

ChemiPURE

Glycerol

CAS No.	56-81-5
Purity	≥99%
Molecular weight (MW)	92.1 g/mol
Molecular formula	C ₃ H ₈ O ₃
Appearance	Liquid
Density	1.26 g/cm ³ at 20° C

Product overview

- A highly pure, water-miscible polyol widely used in molecular biology, biochemistry, and cell biology applications.
- It serves as a stabilizing agent for enzymes and proteins by preventing denaturation and maintaining structural integrity during storage and handling.
- Glycerol is commonly used in enzyme storage buffers, cryopreservation media, and loading buffers for electrophoresis due to its ability to increase solution density and protect biological activity under various conditions.

ChemiPURE

Glycine, Molecular Biology Grade

CAS No.	56-40-6
Molecular weight (MW)	75.07 g/mol
Molecular formula	C ₂ H ₅ NO ₂
Purity	≥99%
Appearance	White
Solubility	Soluble 249.9 g in 1000 mL water

Product overview

- A component of Tris-Glycine and Tris-Glycine-SDS running buffers for polyacrylamide gel electrophoresis.

Ordering options

CATALOG NO.	PACK SIZE
GL05	500 g
GL10	1 kg

Storage

Store at room temperature (15-25°C) in a tightly closed container.

Shipping

Ship at ambient temperature.

Product details & documents

ChemiPURE

Guanidine Hydrochloride, ≥99%

CAS No.	50-01-1
Molecular weight (MW)	95.5 g/mol
Molecular formula	CH ₅ N ₃ HCl
Purity	≥99%
Appearance	White to off-white
Solubility	Water

Product overview

- ChemiPURE Guanidine Hydrochloride is a strong chaotropic agent and a strong denaturant of proteins.
- It is an inhibitor of RNase.
- It can solubilize insoluble or denatured proteins such as inclusion bodies.

Ordering options

CATALOG NO.	PACK SIZE
GH01	100 g

ChemiPURE

Guanidine Thiocyanate, ≥99%

CAS No.	593-84-0
Molecular weight (MW)	118.16 g/mol
Molecular formula	CH ₅ N ₃ .HSCN
Purity	≥99%
Appearance	White to off-white
Solubility	Water

Product overview

- Chaotropic agent for cell and organelle lysis.
- Protein denaturant for nucleic acid purification from crude cell lysates.

Ordering options

CATALOG NO.	PACK SIZE
GT01	100 g
GT05	500 g

ChemiPURE

IPTG, ≥99%

CAS No.	367-93-1
Purity	≥99%
Molecular weight (MW)	238.30 g/mol
Molecular formula	C ₉ H ₁₈ O ₅ S
Appearance	White crystalline powder

Product overview

- Induces lac-regulated gene expression in bacterial systems.
- For recombinant protein expression and blue/white screening with X-Gal.
- Typical working range: 0.1-1 mM, depending on the host, vector and expression system.
- 100 mM stock: 23.83 mg/mL in sterile water; filter through a 0.22 µm membrane.

Ordering options

CATALOG NO.	PACK SIZE
IPTG01	1 g
IPTG05	5 g

Storage

Store at room temperature in a tightly closed container, protected from moisture and light.

ChemiPURE

Kanamycin Sulfate

CAS No.	25389-94-0
Molecular weight (MW)	582.58 g/mol
Molecular formula	C ₁₈ H ₃₆ N ₄ O ₁₁ ·H ₂ SO ₄
Appearance	White powder

Product overview

- This product is a broad-spectrum aminoglycoside antibiotic commonly used in molecular biology, microbiology, and cell culture applications.
- It exerts its antibacterial effect by binding to the 30S ribosomal subunit, leading to inhibition of protein synthesis and causing misreading of mRNA, ultimately resulting in bacterial cell death.

Ordering options

CATALOG NO.	PACK SIZE
KS05	5 g
KS10	10 g
KS25	25 g

Storage

Store between 4-8°C.

Shipping

Ship with blue ice.

ChemiPURE

Magnesium Chloride Hexahydrate, ≥ 99%

CAS No.	7791-18-6
Purity	≥99%
Molecular weight (MW)	203.30 g/mol
Molecular formula	MgCl ₂ ·6H ₂ O
Appearance	White crystalline powder or crystals

Product overview

- ChemiPURE Magnesium Chloride Hexahydrate (MgCl₂·6H₂O) is a high-purity laboratory reagent (≥99%) intended for research, analytical, biochemical, molecular biology, microbiology, and industrial laboratory applications.
- As a highly water-soluble magnesium salt, it serves as an essential source of magnesium ions in a wide range of biological and chemical applications.

ChemiPURE

N,N,N',N'-Tetramethylethylenediamine (TEMED)

CAS No.	110-18-9
Synonym	1,2-Bis-(dimethylamino)ethane
Purity	≥99 %
Molecular formula	C ₆ H ₁₆ N ₂
Molecular weight (MW)	116.21 g/mol
Appearance	Colorless to yellow liquid
Density	0.77 g/mL

Product overview

- This product is a widely used organic compound that serves as an efficient catalyst for the polymerization of acrylamide and bis-acrylamide in polyacrylamide gel electrophoresis (PAGE).
- By accelerating the decomposition of ammonium persulfate (APS) into free radicals, TEMED facilitates rapid and uniform gel formation, ensuring consistent polymerization.
- Due to its high catalytic efficiency, TEMED is an essential component in SDS-PAGE and native PAGE applications, contributing to reproducible gel quality and reliable protein separation results.

Ordering options

CATALOG NO.	PACK SIZE
TMD025	25 mL
TMD100	100 mL

Storage

Store at room temperature (15-25°C) in a tightly closed container. Protect from light and air. After opening, storage at 2-8°C is recommended to maintain stability.

Shipping

Ship at ambient temperature.

ecotechbiotech.com/TMD025/TMD100

ChemiPURE

Poly Acrylamide Gel Accelerator (TEMED Alternative)

- Alternative to TEMED for acrylamide/bis-acrylamide gel polymerization with APS or a suitable initiator.
- Low-volatility, odorless formulation.
- Typical addition: 1-2% (v/v); optimize for the gel formulation and desired setting time.

Applications

Polyacrylamide gel preparation for protein or nucleic acid electrophoresis.

Ordering options

CATALOG NO.	PACK SIZE
PAGA10	10 mL
PAGA25	25 mL

Storage

Store at 2-8°C in a tightly closed container. Shelf life: 1 year.

ChemiPURE

Ponceau S, Sodium Salt

CAS No.	6226-79-5
Molecular weight (MW)	760.57 g/mol
Molecular formula	C ₂₂ H ₁₂ N ₄ Na ₄ O ₁₃ S ₄
Appearance	Dark red to brown powder

Product overview

- A high-quality laboratory dye designed for research, molecular biology, biochemistry, proteomics, and analytical laboratory applications.
- It is widely used as a rapid, reversible protein stain for the visualization of proteins transferred onto nitrocellulose and PVDF membranes following Western blotting.

ChemiPURE

Potassium Chloride, $\geq 99.5\%$

CAS No.	7447-40-7
Purity	$\geq 99.5\%$
Molecular weight (MW)	74.55 g/mol
Molecular formula	KCl
Appearance	White crystalline powder

Product overview

- ChemiPURE Potassium Chloride (KCl) is a high-purity laboratory reagent ($\geq 99.5\%$) intended for research, analytical, biochemical, and industrial laboratory applications.
- Potassium chloride is one of the most widely used inorganic salts in molecular biology, biochemistry, cell biology, microbiology, and analytical chemistry laboratories due to its essential role in maintaining ionic strength and physiological potassium ion concentrations.

ChemiPURE

Potassium Dihydrogen Phosphate, $\geq 99\%$

CAS No.	7778-77-0
Purity	$\geq 99\%$
Molecular weight (MW)	136.09 g/mol
Molecular formula	KH_2PO_4
Appearance	White crystalline powder

Product overview

- ChemiPURE Potassium Dihydrogen Phosphate (KH_2PO_4) is a high-purity laboratory reagent ($\geq 99\%$) intended for research, analytical, biochemical, molecular biology, microbiology, and pharmaceutical laboratory applications.
- As a widely used monobasic phosphate salt, it serves as an essential component in phosphate buffer systems, providing reliable pH control and ionic strength for a broad range of laboratory procedures.

ChemiPURE

Sodium Bicarbonate, >99.5%

CAS No.	144-55-8
Molecular weight (MW)	84.01 g/mol
Molecular formula	NaHCO ₃
Grade	Molecular Biology Grade
Purity	>99.5%
Appearance	White powder
Solubility	Soluble in water (100 mg/mL)

Product overview

- Mild base used for pH regulation and neutralization of acidic spills.

Ordering options

CATALOG NO.	PACK SIZE
SBC10	1 kg

Storage

Store at room temperature (15-25°C) in a tightly closed container.

ChemiPURE

Sodium Chloride, $\geq 99\%$

CAS No.	7647-14-5
Purity	$\geq 99\%$
Molecular weight (MW)	58.44 g/mol
Molecular formula	NaCl
Appearance	White crystalline powder

Product overview

- ChemiPURE Sodium Chloride (NaCl) is a high-purity laboratory reagent ($\geq 99\%$) suitable for a wide range of research, analytical, and industrial laboratory applications.
- Sodium chloride is one of the most commonly used inorganic salts in life science, chemistry, biochemistry, molecular biology, and pharmaceutical laboratories.

ChemiPURE

Sodium Dihydrogen Phosphate Dihydrate, $\geq 98\%$

CAS No.	13472-35-0
Purity	$\geq 98\%$
Molecular weight (MW)	156.01 g/mol
Molecular formula	$\text{NaH}_2\text{PO}_4 \cdot 2\text{H}_2\text{O}$
Appearance	White crystalline powder

Product overview

- ChemiPURE Sodium Dihydrogen Phosphate Dihydrate ($\text{NaH}_2\text{PO}_4 \cdot 2\text{H}_2\text{O}$) is a high-purity laboratory reagent ($\geq 98\%$) designed for research, analytical, biochemical, molecular biology, microbiology, and pharmaceutical laboratory applications.
- As a monobasic phosphate salt, it is an essential component of phosphate buffer systems, providing effective pH control and stable ionic conditions in a wide variety of laboratory procedures.

ChemiPURE

Sodium Dodecyl Sulfate, ≥99.5%

CAS No.	151-21-3
Molecular weight (MW)	288.38 g/mol
Molecular formula	C ₁₂ H ₂₅ O ₄ S•Na
Purity	≥99.5%
Appearance	White
Solubility	Soluble 1 g in 10 mL (opalescent solution)

Product overview

- ChemiPURE Sodium dodecyl sulfate (SDS), also known as sodium lauryl sulfate, is a versatile anionic surfactant with a broad range of applications in cell biology, biochemistry, and various industries.
- Its amphiphilic nature, characterized by a hydrophobic hydrocarbon tail and a hydrophilic sulfate head group, makes it an effective detergent capable of solubilizing and denaturing proteins, lipids, and other hydrophobic molecules.

ChemiPURE

Sodium Hydroxide, $\geq 99\%$

CAS No.	1310-73-2
Purity	$\geq 99\%$
Molecular weight (MW)	40 g/mol
Molecular formula	NaOH
Appearance	White prills

Product overview

- ChemiPURE Sodium Hydroxide (NaOH) is a high-purity laboratory reagent ($\geq 99\%$) intended for research, analytical, biochemical, molecular biology, microbiology, and pharmaceutical laboratory applications.
- As a strong inorganic base, it is widely used for pH adjustment, buffer preparation, reagent formulation, sample processing, and a variety of chemical and biological laboratory procedures.

ChemiPURE

Tris Base, Molecular Biology Grade

CAS No.	77-86-1
Molecular weight (MW)	121.14 g/mol
Molecular formula	C ₄ H ₁₁ NO ₃
Purity	≥99.5%
Appearance	White, Crystallized free base.
Solubility	Soluble 670 mg in 1 mL water

Product overview

- Widely used as a component of buffer solutions such as in TAE (TAE Buffer 50x, pH 8.3) and TBE (TBE Buffer 10x, pH 8.3) buffers, especially for nucleic acid electrophoresis.
- It is also a component of buffers for protein electrophoresis, such as TG-SDS buffer.
- Highly purified for use in molecular biology applications.

ChemiPURE

Triton X-100

CAS No.	9002-93-1
Purity	≥98%
Molecular weight (MW)	647 g/mol
Molecular formula	C ₃₄ H ₆₂ O ₁₂
Appearance	Colorless to light yellow liquid
Density	1.07

Product overview

- A non-ionic surfactant widely used for cell lysis, membrane solubilization, and protein extraction in molecular biology and biochemistry applications.
- It effectively disrupts lipid-lipid and lipid-protein interactions while preserving protein structure and function, making it suitable for gentle extraction of membrane-associated proteins.
- Commonly utilized in cell lysis buffers, immunoassays, and protein purification workflows due to its high solubilizing capacity and compatibility with a wide range of biological systems.

Ordering options

ChemiPURE

Tween-20, Reagent Grade

CAS No.	9005-64-5
Molecular weight (MW)	1228 g/mol
Molecular formula	C ₅₈ H ₁₁₄ O ₂₆
Appearance	Colorless to light yellow liquid
Density	1.1 g/cm ³ (25 °C)

Product overview

- ChemiPURE Tween-20 (Polysorbate 20) is a non-ionic surfactant widely used in molecular biology, biochemistry, and immunoassay applications.
- It is commonly employed as a mild detergent in wash buffers to reduce non-specific binding and background signal in techniques such as ELISA, Western blotting, and immunohistochemistry.
- ChemiPURE Tween-20 helps stabilize proteins and enzymes without denaturing them, making it suitable for maintaining biological activity while improving assay reproducibility and signal clarity.

ChemiPURE

Urea, Molecular Biology Grade

CAS No.	57-13-6
Molecular weight (MW)	60.056 g/mol
Molecular formula	H ₂ NCONH ₂
Purity	≥99%
Appearance	White, crystallized free base

Product overview

- Used for the denaturation of proteins and as a mild solubilization agent for insoluble or denatured proteins.
- It is useful for renaturing proteins from samples already denatured with 6 M guanidine chloride such as inclusion bodies.
- May be used with guanidine hydrochloride and dithiothreitol (DTT) in the refolding of denatured proteins into their native or active form.

EcoZyme

Proteinase K

- A pre-made molecular biology grade enzyme solution which is supplied at a concentration of 20 mg/mL in 10 mM Tris-HCl (pH 7.5), 1 mM calcium chloride and 50% glycerol.
- This product from the fungus *Tritirachium album* is a stable and highly reactive nonspecific serine protease that is useful for general digestion of proteins.
- Capable of inactivating RNases and DNases and is used in the isolation or preparation of high-molecular-weight nucleic acids.
- Stable at various temperatures and may be used at 56°C for up to 4 hours, or 37°C for overnight incubations.

Applications

This product is stable at various temperatures and may be used at 56°C for up to 4 hours, or 37°C for overnight incubations.

FlashDigest

NheI

- FlashDigest Fast Endonucleases are a series of genetically engineered restriction enzymes designed for fast and efficient digestion of plasmid DNA, PCR products, and genomic DNA.
- FlashDigest enzymes exhibit high activity in both 10x FlashDigest Buffer and 10x FlashDigest Red Buffer, enabling complete digestion within 5-15 minutes.

Applications

FlashDigest Fast Endonucleases are a series of genetically engineered restriction enzymes designed for fast and efficient digestion of plasmid DNA, PCR products, and genomic DNA.

Sample / input

Plasmid DNA, PCR products and genomic DNA.

EcoClone

Basic

- A high-copy cloning vector designed for the molecular biology applications described below.
- It is supplied as purified plasmid DNA for research use only.
- Vector size: 2686 bp Promoter: lac promoter/operator Bacterial selection: Ampicillin Mammalian selection: None Reporter / tag: lacZα screening cassette Origin of replication: pUC/ColE1-type high-copy bacterial origin

Applications & vector details

Routine DNA cloning; Subcloning; Blue/white screening; Sequencing template preparation. Multiple Cloning Site (MCS): EcoRI - SacI - Acc65I/KpnI - XmaI/SmaI - BamHI - XbaI - SalI - AccI/HincII - PstI - SphI - HindIII Important Note: For Research Use Only. Not for use in diagnostic procedures. The MCS lies within the lacZα region, enabling insertional inactivation-based blue/white screening in compatible host strains.

Ordering options

CATALOG NO.	PACK SIZE
PL0001	100 µL (50 ng/µL; 5 µg total DNA)

Storage

Store at -20°C.

Shipping

Ship at ambient temperature.

EcoClone Phagemid

- A cloning and sequencing phagemid vector designed for the molecular biology applications described below.
- It is supplied as purified plasmid DNA for research use only.
- Vector size: 2958 bp Promoter: lac promoter/operator; T7 and T3 promoters flank the cloning region Bacterial selection: Ampicillin Mammalian selection: None Reporter / tag: lacZα screening cassette Origin of replication: bacterial ori; f1 ori

Applications & vector details

Routine cloning and subcloning; Blue/white screening; Sanger sequencing template preparation; In vitro transcription from T7/T3 promoters. Multiple Cloning Site (MCS): Acc65I/KpnI - Apal - XhoI - Sall/AccI/HincII - ClaI - HindIII - EcoRV - EcoRI - PstI - XmaI/SmaI - BamHI - SpeI - XbaI - NotI - SacII - BstXI - SacI Important Note: For Research Use Only. Not for use in diagnostic procedures. The supplied map shows T7 and T3 promoters, M13 forward/reverse primer regions, lacZα, f1 ori and AmpR.

EcoClone T-Link

- A compact, high-copy bacterial cloning and sequencing vector with kanamycin resistance.
- The 3,143 bp circular plasmid contains T7 and SP6 promoter regions flanking the cloning region, M13 forward and reverse sequencing primer sites, a lac promoter/operator region, a high-copy bacterial origin of replication, and an f1 origin.
- It is supplied as purified plasmid DNA for research use only.
- Vector size: 3143 bp; circular Promoter / regulatory elements: T7 promoter; SP6 promoter; lac promoter/operator Bacterial selection: Kanamycin [aph(3')-II / nptII] Mammalian selection: None Sequencing sites: M13 forward and reverse primer sites Origin of replication: High-copy ColE1/pMB1/pBR322/pUC-type ori; f1 ori

Applications & vector details

Routine DNA cloning and subcloning; Sequencing-template preparation using M13/T7/SP6 regions; In vitro transcription from T7 or SP6 promoters; Preparation of a TA-cloning backbone following appropriate linearization and 3'-T tailing; Plasmid propagation in compatible E. coli strains. Multiple Cloning Site (MCS): EcoRI - BamHI - ClaI - BamHI - HindIII Important Note: For Research Use Only. Not for use in diagnostic procedures. The supplied material is circular plasmid DNA. For direct TA cloning of PCR products, the vector must first be linearized and prepared with compatible 3'-T overhangs. Restriction-site availability, insert orientation, and selection conditions should be verified for the intended cloning workflow.

EcoExpress

CMV-Neo

- A mammalian expression vector designed for the molecular biology applications described below.
- It is supplied as purified plasmid DNA for research use only.
- Vector size: 5428 bp Promoter: CMV immediate-early promoter/enhancer Bacterial selection: Ampicillin Mammalian selection: Neomycin/G418 Reporter / tag: None Origin of replication: bacterial ori; SV40 ori

Applications & vector details

Mammalian gene overexpression; Transient transfection; Generation of stable G418-selected cell lines; Protein function and signaling studies. Multiple Cloning Site (MCS): NheI - AflIII - HindIII - Acc65I/KpnI - BamHI - BstXI - EcoRI - EcoRV - BstXI - NotI - XhoI - XbaI - ApaI Important Note: For Research Use Only. Not for use in diagnostic procedures. Insert orientation, reading frame and stop-codon design should be confirmed for the intended expression construct.

EcoExpress

GST-A

- A GST fusion bacterial expression vector with ampicillin resistance designed for the molecular biology applications described below.
- It is supplied as purified plasmid DNA for research use only.
- Vector size: 4969 bp Promoter: tac promoter Bacterial selection: Ampicillin Mammalian selection: None Reporter / tag: GST fusion tag; thrombin cleavage site Origin of replication: bacterial origin of replication

Applications & vector details

GST fusion protein expression; Glutathione affinity purification; GST pull-down assays; Protein-protein interaction studies. Multiple Cloning Site (MCS): BamHI - EcoRI - XmaI/SmaI - SalI/AccI - XhoI - NotI Important Note: For Research Use Only. Not for use in diagnostic procedures. The insert must be cloned in-frame with GST for fusion expression. pGEX 5' and 3' sequencing primer regions are present on the supplied map.

EcoExpress

T7-HisA

- An N-terminal His-tag bacterial expression vector with ampicillin resistance designed for the molecular biology applications described below.
- It is supplied as purified plasmid DNA for research use only.
- Vector size: 5708 bp Promoter: T7 promoter / lac operator Bacterial selection: Ampicillin Mammalian selection: None Reporter / tag: N-terminal 6xHis; thrombin cleavage site Origin of replication: bacterial origin of replication

Applications & vector details

Recombinant protein expression; His-tag affinity purification; Enzyme production; Protein characterization. Multiple Cloning Site (MCS): NcoI - NdeI - XhoI - BamHI - HindIII Important Note: For Research Use Only. Not for use in diagnostic procedures. The supplied map shows the 6xHis region, thrombin site, T7 promoter/lac operator and T7 terminator. Insert reading frame and cleavage strategy should be confirmed before cloning.

EcoExpress

T7-HisK

- A T7 His-tag bacterial expression vector with kanamycin resistance designed for the molecular biology applications described below.
- It is supplied as purified plasmid DNA for research use only.
- Vector size: 5369 bp Promoter: T7 promoter / lac operator Bacterial selection: Kanamycin Mammalian selection: None Reporter / tag: 6xHis; thrombin cleavage site Origin of replication: bacterial ori

Applications & vector details

Recombinant protein expression; Ni-NTA/IMAC purification; Enzyme production; Protein biochemical and functional studies. Multiple Cloning Site (MCS): XhoI - NotI - HindIII - SalI - SacI - EcoRI - BamHI - NheI - NdeI Important Note: For Research Use Only. Not for use in diagnostic procedures. Use a compatible host supplying T7 RNA polymerase. The final His-tag arrangement depends on cloning sites, reading frame and presence or absence of an insert stop codon.

EcoFluor EGFP-N

- A C-terminal EGFP fusion vector designed for the molecular biology applications described below.
- It is supplied as purified plasmid DNA for research use only.
- Vector size: 4733 bp Promoter: CMV promoter/enhancer Bacterial selection: Kanamycin Mammalian selection: Neomycin/G418 Reporter / tag: EGFP Origin of replication: bacterial ori; SV40 ori

Applications & vector details

Live-cell fluorescence imaging; Subcellular localization; Protein trafficking and dynamics; Fusion-protein expression studies. Multiple Cloning Site (MCS): BglII - XhoI - SacI - HindIII - EcoRI - PstI - SalI/AccI - Acc65I/KpnI - SacII - XmaI/ApaI/SmaI - BamHI - AgeI Important Note: For Research Use Only. Not for use in diagnostic procedures. The MCS is upstream of EGFP. For a continuous protein-EGFP fusion, the insert should normally be cloned without its native stop codon and in the correct reading frame.

EcoPlant GUS

- A GUS plant binary expression vector designed for the molecular biology applications described below.
- It is supplied as purified plasmid DNA for research use only.
- Vector size: 14758 bp Promoter: CaMV 35S promoter; NOS promoter Bacterial selection: Kanamycin resistance; tetracycline resistance shown on map Mammalian selection: Not applicable Reporter / tag: GUS (β -glucuronidase) reporter; NeoR/KanR plant selection cassette Origin of replication: oriV; bacterial replication/transfer elements

Applications & vector details

Agrobacterium-mediated plant transformation; Plant gene expression studies; GUS reporter assays; Plant promoter / transgene studies. Multiple Cloning Site (MCS): HindIII - SbfI - XbaI - BamHI - XmaI/SmaI (cloning-region sites shown near the CaMV 35S/GUS cassette) Important Note: For Research Use Only. Not for use in diagnostic procedures. The supplied map shows RB/LB T-DNA repeats, CaMV 35S-driven GUS, NOS regulatory elements and a NeoR/KanR selection cassette within the T-DNA region. Vector behavior and selection conditions should be validated for the intended plant/Agrobacterium system.
